

Expert cybersecurity. Managed for you.

Cisco® Managed Detection and Response (MDR) combines an **elite team of security experts**, **integrated threat intelligence**, plus **defined investigation and response playbooks**, supported by Cisco Talos® threat research. We monitor your digital security 24 hours daily, 365 days a year to detect and contain threats faster.

With Cisco MDR, you can...

Access critical security resources

● Before MDR

Your team **struggles to find, recruit, and retain** the security expertise you need to ensure a consistent, highly effective security operation.

● After MDR

Deliver effective security with access to the unique intelligence and experience of **skilled cybersecurity incident researchers and responders**.

Manage alerts with ease

● Before MDR

The high frequency of security threats and expanding attack surface overwhelms your team, **increasing the chance of failing to detect threats**.

● After MDR

Act swiftly on prioritized alerts, leveraging our expertise **to identify threats and attacker attributes**, while utilizing impact and urgency measures to drive your response.

Simplify operations and boost response discipline

● Before MDR

A combination of inefficient security workflows and overwhelming threat volume causes **inconsistent identification and delayed responses**.

● After MDR

Increase operational efficiency with proven security processes, automated investigation and response playbooks, and real-time recommendations.

Enjoy faster, more effective containment

● Before MDR

When threats are identified, **your team is unsure** how to measure the impact and urgency to mount an effective response.

● After MDR

Minimize breach impact with **accelerated threat intelligence** and **relevant containment measures** executed on your behalf.
