It's about time.

Wireless Assurance gives you the visibility and insights to solve
for network challenges in the past, present, and future.
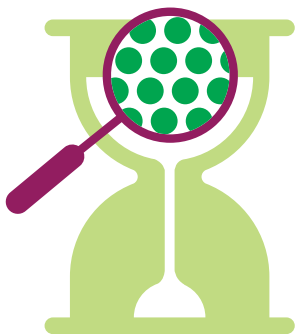

Three weeks ago
Use retained insights to shed light on the past.

A few weeks ago, your network experienced a major outage that left email in limbo and apps unavailable. Now, with Cisco DNA Center Assurance, you can revisit the exact moment that everything went wrong, pinpoint the cause, and take action to prevent it from ever happening again.

Four days ago
Fix issues before they become emergencies.

Employees have been reporting that Wi-Fi connections were spotty and unreliable the last few days. Luckily, you can get guided remediation and a full view of both wired and wireless endpoints, so you can instantly spot the problem, resolve it efficiently, and improve the quality of experience.

Right now
Inspect granular and contextual data.

At any given moment, your network could be at risk for a security breach. Internet of Things devices could compound the risk. But with an always-on view of the data on your network—and the contextual insights to make sense of it—blind spots are a thing of the past. One tool, total visibility.

Next week
Get end-to-end visibility of your network.

Your company is growing fast, and next week you'll be onboarding an entire team. Are you ready to support the devices and traffic increase that come with them? Of course you are. With simplified management, you can see exactly how new users will fit into your network.

Two months from now
Go from troubleshooting to informed predictions.

Your office is planning a big event that will increase your network occupancy by 200 percent, and attendees will expect a flawless Wi-Fi experience. Don't wait until the big day to find out if your network can handle it. Run tests in DNA Center now so you can get in-depth predictions optimized specifically for your network.

Take control of your time.

Our experts make it easy to get started, so you can quickly and confidently leverage advanced analytics and actionable insights for your business. See how you can use Cisco DNA Center Assurance capabilities to monitor network status and resolve issues proactively and predictively.
